

GreenHome INSTITUTE

Select a value between 1 and 4. For houses built into a hillside, (e.g., one floor above ground level on one side, two floors above ground level on the other side or a walk-out basement) treat the house as if it had one floor above ground level and a conditioned basement. For Cape Cod and Split Level houses the "half" floor should be counted as an above grade floor, e.g. a typical Cape Cod with conditioned 2nd floor should be entered as 2 stories.
